Education

THAPAR INSTITUTE OF ENGINEERING AND TECHNOLOGY

Bachelor of Engineering in Computer Engineering – CGPA – 8.88/10

Aug 2017 – Jul 2021

Patiala, Punjab

Experience

OPTUM (UNITED HEALTH GROUP)

Nov 2025 – Present

Senior Software Developer

Gurugram, India

- Working on CAMS (Consumer Account Management System), supporting HSA and HRA account operations used by US employees for tax-advantaged healthcare benefits.
- Developing and enhancing **Spring Boot microservices** for account eligibility, contributions, reimbursements, and transaction workflows.
- Enhancing platform reliability by implementing Kafka-based event communication, deploying scalable services using Docker & Kubernetes, and supporting production monitoring through Splunk and Dynatrace.
- Tech Stack: Java 8, Spring Boot, MySQL, Postman, FreeLens, IntelliJ, Git, Design Patterns, Jenkins, Microservices, Kafka, Docker, Kubernetes, Splunk, Dynatrace**

AMDOCS

Jul 2021 – Oct 2025

Software Developer (Experienced)

Gurugram, India

- Engineered a Bash Scripting-based Inproc tool, replacing manual configuration processes across all environments, achieved **setup time reduction by 50%**, enhancing developer efficiency and productivity.
- Developed and optimized microservices for the **SOM to ODO project**, revamping **critical business services** to ensure **scalability and reliability** including unit testing with JUnit and CI/CD integration.
- Tech Stack: Java 8, Spring Boot, MySQL, Postman, IntelliJ, Git, Design Patterns, Jenkins, Microservices**

AMDOCS

Jan 2021 – Jun 2021

Associate Software Developer

Bangalore, India

- Delivered backend services for the Order Delivery Orchestrator (ODO) to streamline telecom order processing by **25%**, while resolving critical issues across ST, SIT, UAT, and production environments that improved system stability by **30%** and ensured smoother deployments.

Personal Projects

AUTBOT

- The AutBot device will capture the emotion of the child **throughout 100% of the activity performed** and send the results to doctors, ensuring accurate and timely insights for better diagnosis.
- AutBot is an **intelligent system** that can be used at home by caregivers for **10+ interactive activities** that will improve the child's vocabulary significantly and develop social interaction.
- Tech Stack: Arduino, Sensors, Emotion Detection Algorithms, IoT Integration, Java, C++**

TRAFFIC PREDICTION & CONTROL SYSTEM

- Built a system using **YOLO (object detection)** and **ARIMA (time series modeling)** to predict traffic flow and optimize traffic management, reducing congestion by 30%.
- Tech Stack: Python, OpenCV, Flask, Numpy, Pandas, Google Maps API**

Technical Skills

Languages: Java (4+ years), C++, JavaScript, Python

Frameworks: Spring Boot, React

Cloud & DevOps: AWS (basic), Docker, Kubernetes, Jenkins, Linux, Bash Scripting, Git, Jira

Others: SQL, Rest APIs, Kafka, RabbitMQ, Microservices, Design Patterns, System Design, DSA

Coding Profiles: [Leetcode](https://leetcode.com), [GFG](https://www.geogeforge.com)

Achievements

- Consistently recognized as top performer member for exceptional dedication and contribution to project success.
- Competed with 20+ teams, won Owasp Hackathon for **Hack-O-Charity** project and awarded by Paytm Vice President.
